

Why choose a Killusty Kitchen Garden?

The Killusty Kitchen garden is a low-maintenance instant garden. It features deep soil that allows deep healthy roots. The Killusty Kitchen garden also require less watering, due to a strong root system. Deep, nutrient rich soil means more food for less space and work.

Low Maintenance Tips:

- Before planting cover the garden with a sheet of clear polythene. This will encourage unwanted seeds to germinate; the heat will then kill them. Weeds can be prevented by mulching around the plants.
- Attach a trellis on the north side for climbing plants, such as, tomatoes.
- Make an automatic watering system. Collect rain water from the roof in a barrel. Gravity feed water by hose pipe to the garden. Small holes in the pipe allow water to trickle out.
- Hoops of plastic can support mesh or polythene to modify temperature extremes.

A start toward independence from an uncertain food supply...

Home grown food makes good environmental sense. Food which travels from your yard to your dinner plate protects air quality by eliminating the need for long distance transport.

Ecological gardening actually improves the health of the soil by restoring fertility and productivity. Growing your food without toxic products eliminates the worry of chemical residues.

Every garden, no matter how small, is good for the environment.

What are the benefits of a Killusty Kitchen garden?

- Create a vegetable garden in an area with little or no soil (paved or grassy areas)
- Low-maintenance instant garden
- Save money by growing fresh and nutritious produce
- Deep soil means deeper roots, better drainage that retains moisture.
- Nutrient rich soil means more food in less space and work.

The Magic Soil...

Soil has been described as the poor man's rain forest. It is unequalled for its diversity and abundance of animal life. In the Amazon Rain Forest 95% of nutrients are stored in the plants, compared to a temperate zone where the nutrients are in the soil. Biologists say it takes hundreds of years to make an inch or two of topsoil - Red Wiggler composting worms can do it in months.

Killusty Kitchen soil is like chocolate cake - easy to work and requires no backbreaking digging. The soil is packed with nutrients and requires no additional additives.

Grow your own salads and vegetables in a 6 foot by 6 foot raised bed filled with 12 inches of magic soil made from worm-composted farm manure.

Killusty Kitchen gardens are modular and can be sited anywhere that has at least a half-day of full sunlight.

Cost: \$195.00 + GST
